SUB.: SUBMISSION OF ANNUAL REPORT FOR THE FINANCIAL YEAR 2017-2018 AS PER REGULATION 34 OF SEBI (LODR) REGULATIONS, 2015

Dear Sir,

With reference to the captioned subject, please find enclosed herewith the copy of Annual Report of the Company for the Financial Year 2017-2018 including the Notice of Annual General Meeting (AGM), Audited Annual Accounts (including Audited Consolidated Annual Accounts) for the year ended 31st March, 2018 along with necessary annexure & Reports of Directors' and Auditors' thereon, duly approved and adopted by the Members of the company at its 11th Annual General Meeting held on 20th September, 2018.

The said Annual Report also contains the Corporate Governance Report, Management Discussion & Analysis Report, Business Responsibility Report, Practicing Company Secretary's Certificate on Corporate Governance and Secretarial Audit Report as per the relevant provisions of the Companies Act, 2013 and SEBI (LODR) Regulation, 2015.

Kindly take this on your record.

Thanking you.

Yours faithfully,
For, **Dishman Carbogen Amcis Limited**

Shrima Dave

Energising Science for Life

We are a differentiated CRAMS player with strong chemistry skills, cost efficient and flexible manufacturing processes, focused operations and product portfolio. These have helped us establish strong customer relationships, leading to scale-up of our CRAMS and API business over the last few years, helping sustain higher profitability and return ratios.

We have invested in world-class facilities and state-of-the-art infrastructure, which provides us with an unparalleled analytical support for research, development and commercial production of late-stage intermediates and APIs. We also churned our existing capacities better by focusing more on low-volume, high-value orders to improve margins.

Our expanded capacities make us strongly placed to benefit from a revival in the global CRAMS industry, which has high EBITDA margin. This is enabling us in assisting the drug innovators in development and optimisation of processes for novel drug molecules in various stages of the development process at an Asian cost base. We continue to diversify across new geographies, besides having enhanced our penetration in the US market. We are earning incremental revenues from HiPo business with better realisations.

WE HAVE STRONG COMPETITIVE ADVANTAGES AND CAPABILITIES ACROSS THE VALUE CHAIN – FROM PROCESS RESEARCH AND DEVELOPMENT TO LATE-STAGE CLINICAL AND COMMERCIAL MANUFACTURING. THE CRAMS SPACE PROVIDES US WITH A LARGE OPPORTUNITY, DRIVEN BY INNOVATORS. WE COLLABORATE WITH INNOVATOR COMPANIES FROM CONCEPTION TO COMMERCIALISATION STAGE TO BRING THE DRUG TO THE MARKET. WE ARE WELL POSITIONED TO ACHIEVE SEQUENTIAL GROWTH GIVEN OUR STRONG RELATIONSHIPS WITH INNOVATORS, OUR PRESENCE ACROSS THE CRAMS VALUE CHAIN, AND OUR ABILITY TO SUPPORT THEM IN LATE LIFE-CYCLE STRATEGIES.

Revenues (₹ Crore)

Incorporated in 1983, Dishman Carbogen Amcis Limited (DCAL) initially started out as a manufacturer of quaternary ammonium and phosphate compounds. Having ventured into the CRAMS space in India, the Company soon became one of the fastest-expanding companies. Since then, we have entered into multiple contracts with innovator companies. We have diversified our portfolio with the acquisition of Carbogen Amcis UK and Carbogen Amcis Switzerland and Dishman Netherlands. Later on the Company established a subsidiary in Shanghai by way of a greenfield project as well as acquired a company in France for development of small volume injectables formulation.

Today, we are a fully-integrated CRAMS (Contract Research & Manufacturing) player with global pharma innovators. We have a global presence with development and manufacturing sites at Europe, India and China. We provide an end-to-end integrated high-value low-cost CRAMS offerings right from process research and development to late stage clinical and commercial manufacturing and supply of active pharmaceutical ingredients or APIs to innovator pharmaceutical companies.

**Bavla, Gujarat,
India – Unit 4**

- » Dedicated starting material plant
- » 11 Reactors, Total Capacity 39KL
- » High vacuum distillation

**Bavla, Gujarat,
India – Unit 5**

- » Intermediate manufacturing facility
- » Solvent distillation facility

**Bavla, Gujarat,
India – Unit 10**

- » Disinfectant formulation plant for Aerosols, and hard surface disinfectants
- » Class 100,000 finishing area with 5 filling lines
- » Formulation & Development

**Bavla, Gujarat,
India – Unit 13**

- » Multi-product facility
- » Dedicated staff for manufacturing, QC, QA and Engineering support

**Naroda, Gujarat,
India**

- » APIs, quaternary biocides & fine chemicals
- » Approx 20 major products (Bisacodyl, CPC, Cetrimide)

**Pilot Plant, Naroda,
Gujarat, India**

- » KiloLab reaction capacity 4 X 30 – 100 L reactors
- » GMP pilot plant 10 x 250-1000L
- » Class 100,000 finishing area

Our Manufacturing Footprint

CARBOGEN AMCIS AG, Site Bubendorf & Headquarter, Switzerland

- » Lab, administration and containment facilities with 260 employees
- » Clean room dedicated for Antibody Drug Conjugates
- » Multi-purpose clean room dedicated for purification of high-potent by HPLC process
- » Process optimisation and supply of late-phase and commercial APIs
- » Inspected by FDA, SwissMedic and Korean Health Authority MFDS
- » Holds accreditation as foreign manufacturer for Japan

CARBOGEN AMCIS AG, Site Vionnaz, Switzerland

- » Significant increase in development and manufacturing capacity on High potent APIs
- » From gram to kilogram scale; Categories 3 and 4
- » GMP compliant; Swissmedic
- » Combination of the initial team knowledge and Carbogen Amcis expertise

CARBOGEN AMCIS LTD., Site Manchester, UK

- » Specialises in process research and non-GMP custom synthesis of pharmaceutical intermediates with 50 employees
- » Larger capacity (up to 4,500 L) facilitates production of early-phase APIs and large-scale intermediates

CARBOGEN AMCIS SAS, Site Riom, France

- » 10,000 m² site with 21 highly-qualified specialists
- » Primary focus on formulation of new products and aseptic drug products of preclinical and clinical batches of injectables in liquid or freeze-dried form
- » 400 m² production area with clean rooms and separate laboratories for formulation development and quality control (micro-biological and analytical controls)
- » Inspected by French Health Authority ANSM

**CARBOGEN AMCIS AG, Site Aarau,
Switzerland**

- » Primary focus on process research and early-phase API supply with 115 employees
- » Primary location for chromatography and product-handling facilities
- » SwissMedic inspected
- » US FDA inspected

**CARBOGEN AMCIS AG, Site NEULAND,
Switzerland**

- » Primary location for ICH stability studies and solid state services with 45 employees
- » Inspected by the SwissMedic and Korean Health Authority MFDS
- » US FDA inspected

**DISHMAN NETHERLANDS B.V., Veenendaal,
The Netherlands**

- » Primary location for manufacture and marketing of Vitamin D analogues, Vitamin D3, Cholesterol and Lanolin related products
- » Operates under cGMP; ISO 9001 and 14001 certified
- » FDA inspected; Holds Certificate of Suitability by EDQM and DMFs

**CARBOGEN AMCIS (SHANGHAI) CO. LTD.,
Site Shanghai, China**

- » Production and supply of pharma intermediates and APIs under cGMP
- » Ten reactors from 2500L to 8000L scale
- » Allows larger production of nominal batch sizes of 150kg to 630kg
- » Dedicated analytical and QC capability
- » Fully qualified process control and monitoring systems
- » On-site bulk solvent storage and waste treatment facilities

The Year That Was

Our Key Performance Indicators

Revenue (₹Crore)

Revenue Break-Up (₹Crore)

EBITDA (₹Crore)

Cash Profit (₹Crore)

Cash Earnings Per Share (₹)

WE CONTINUE TO BUILD ON OUR FUNDAMENTALS BY EXECUTING OUR ONGOING PROJECTS AND IMPROVING OPERATIONAL EFFICIENCY. WE ARE CONSTANTLY AIMING AT INCREASING THE OVERALL PROFITABILITY MARGIN BY IMPROVING OUR CAPACITY UTILISATION.

Our Revenue Mix (%)

Our Key Initiatives in FY2018

- » Present across the CRAMS value chain and changed dependence on large innovators from 70%-80% in FY2011 to 25%-30% in FY2018
- » HiPo facility at Bavla running at full installed capacity utilisation; Other 2 chambers to be made operational shortly to support higher overall margins
- » Successful inspection of one of Carbogen Amcis AG's manufacturing facilities by the USFDA
- » Identified key segments to support a strong development pipeline such as oncology, cardiovascular, central nervous system, ophthalmic and drugs under orphan drug category
- » One of the key oncology molecules, which was being developed by the Company, received approval from the European Health Authorities, in addition to the USFDA approval
- » Planned increase in development capacity at Carbogen Amcis AG to add to incremental revenues in the future

Future Growth Drivers for Manufacturing Capacities

Carbogen Amcis was running at 95% capacity utilisation, and has a strong order book of CHF 90 million. Constraints in taking any new orders impacted few contracts, however, Carbogen Amcis acquired a building in Switzerland, which will be operational by the second quarter of FY2019, giving further impetus to the existing order book. In the HiPo facility, one molecule each was made commercial, and we expect more molecules out of this unit to be successfully developed, which would present a tremendous growth opportunity.

Some expansion of the current installed capacities in Unit 9 is being undertaken to make 2 cells operational, based on the possibility of a sizeable order book for this unit, owing to one of the molecules being successfully developed. This will also lead to improvement in the overall profitability margins to increase further, as the capacity utilisation of this plant increases.

Chairman & Managing Director's Message

Janmejay R. Vyas
Chairman & Managing Director

Dear Shareholders,

It is my honour and privilege to interact with you as the Chairman of the Board. The fiscal has been an exciting one for the Company. We took the opportunity to strengthen our business by reducing our operating expenses and capital investment, while continuing to drive our efforts towards utilising our capacities in an optimal manner. We remain on course to meet our strategic targets and deliver sustainably. We are fully confident that Dishman will continue to succeed and thrive in the future.

Today, we are a global and integrated CRAMS player with strong capabilities across the value chain – from process research and development to late-stage clinical and commercial manufacturing. We are proud to have become the preferred outsourcing partner across continents and countries and also to service customers from all the key advanced markets including US, Europe and Asia. The global pharmaceutical and bio-pharmaceutical CRAMS market has been growing year on year, with an increasing emphasis on generic alternatives from developed countries. Global pharmaceutical companies are focusing on marketing and discovery, and are outsourcing drug development, clinical trials and manufacturing.

12.89%

ESTIMATED CAGR OF INDIAN PHARMACEUTICAL
INDUSTRY BETWEEN 2015-20

OUR KEY CAPABILITIES OF STRONG CHEMISTRY SKILLS, LOW COST AND FLEXIBLE MANUFACTURING PROCESSES ARE HELPING US ESTABLISH STRONG CUSTOMER RELATIONSHIPS AND SUSTAIN HIGHER PROFITABILITY.

We are leveraging our key capabilities of strong chemistry skills, low cost and flexible manufacturing processes, focused operations and our product portfolio. These factors have helped Dishman establish strong customer relationships, leading to scale-up in our CRAMS and API businesses, and have helped sustain higher profitability and better return ratios. These are also the factors that we capitalise on to differentiate ourselves from other Indian CRAMS players.

Laying our Foundation for Long-Term Growth

At Dishman, our focus continues to be on improving our margins with higher capacity utilisation and high margin revenues from the niche and highly potent compounds. We are also focusing on improving our asset turnover and return ratios, and improving our liquidity to capture business opportunities for even stronger growth. We have been gaining the flexibility to manufacture from either of the facilities, thereby reducing dependence on a single plant. This will also free up the capacity constraint at Carbogen Amcis, allowing the site to focus on early phase chemical synthesis work. Going forward, we remain on course to meet our strategic targets and

deliver sustainably. We are confident of the Dishman Group continuing to succeed and thrive in the future.

I take this opportunity to convey thanks to our Board Members for their constant guidance and support. We look forward to their support as we continue to create long-term value for our stakeholders.

On behalf of the Board, we thank our the shareholders for believing in us, the Management of Dishman Carbogen Amcis, and the employees for their loyalty and contribution.

Janmejay R. Vyas
Chairman & Managing Director

Managing Director's Message

Arpit Vyas
Managing Director & CFO

WITH NO MAJOR CAPEX PLANNED FOR THE NEXT FEW YEARS AND A SIGNIFICANT CHUNK OF THE PORTFOLIO GEARED TOWARDS HIGHER END API SUPPLIES, WE FORESEE AN IMPROVEMENT IN OUR PROFITABILITY.

Dear Shareholders,

We are pleased to present to you the FY2018 Annual Report of your Company. I would like to take this opportunity to highlight the company's philosophy, key developments and share my thoughts on prospects for the years ahead.

Firstly, I would like to mention that we are a company built on strong values of ethics and transparency. We work tirelessly day in and day out to ensure that based on our value system and with the help of innovation, we are able to provide best in class novel chemical entities to our customers. Our goal is to eventually see a world where there are no diseases and it becomes a happy place to live in. With this goal in mind, we have identified five key therapeutic areas where we would want to be focusing our energies on. These include oncology, cardiovascular, CNS, ophthalmic and drugs for diseases where there is no cure right now. We have built a very strong pipeline of APIs, across various development phases and more significantly in late Phase III, which gives us a tremendous visibility for the next 3-5 years. Our strategy of "One Company Two Brands" is working well, which is taking us closer to our goal.

We are extremely excited with the pipeline products and the new chemical molecules commercialised over the last 2-3 years. We are confident of a significant growth in revenues and profitability over the next 3-5 years. However, I would like to mention that many of the milestones before commercialisation of a molecule are in the hands of our customer and the regulatory agency so sometimes it may take longer than expected for conversion of our sustained efforts into financial numbers.

Being the Preferred API Supplier

We are the preferred or sole active pharmaceutical ingredient (API) supplier for most products approved by the US Food and Drug Administration (USFDA) and other regulatory agencies.

We share strong relationships with our clients and work majorly with innovators for the supply of APIs or research activities. The top ten global players account for 35% of our turnover. We have made inroads into small and medium-

sized biotech companies, thereby mitigating our revenue concentration risk.

Our Financial Performance

During the year, the CRAMS segment contributed 76% of our total revenue, while 24% of the revenue was contributed by other segments like bulk drugs, intermediates, specialty chemicals, vitamins and disinfectants.

In the CRAMS segment, Carbogen Amcis was the best performer with revenue of ₹ 973.33 crore, a rise of 5.51% compared to ₹ 922.46 crore in the previous year. In the Marketable Molecules segment, Dishman Netherlands was the best performer with ₹ 196.26 crore.

Our Revenue from Operations stood at ₹ 1,694.79 crore and EBITDA stood at ₹ 445.35 crore which represents 26.27% of Net Revenue. Fall in raw material prices, cost rationalisation and a better product mix led to an expansion in margins during the year. Profit After Tax was ₹ 154.57 crore, higher by 6.28% compared to ₹ 145.43 crore. We have been sharpening our focus on profitability by scaling down low-margin products.

Improving Profitability

With no major capex planned for the next few years, and a significant chunk of the portfolio geared towards higher-end API supplies, we foresee an improvement in our profitability and increased cash flows, which will be utilised to invest into assets for future growth. Further, interest cost savings due to repayment of debt and margin expansion is expected to drive earnings CAGR over the next few years. Scalability of our HiPo facility and further approvals from regulatory authorities is expected to result in better profitability.

We expect profitability improvement to be supported by the scale-up of utilisation levels at our plants, particularly at the HiPo plant (Unit 9), further profitability improvement at the Shanghai plant and certain measures, including product focus and streamlining the supply chain of the Vitamin D business.

35%

CONTRIBUTION BY TOP TEN GLOBAL PLAYERS IN OUR REVENUE.

Our endeavor to constantly scale our businesses, diversify into new growth avenues, and consistently outperform ourselves, has helped us carve out a considerable share of the market in our areas of presence.

Going forward, we will continue to invest in people with the right expertise and R&D to keep our pace with our growth and become enabled to scale to new growth frontiers. As a trusted partner to all our stakeholders, we will continue to responsibly provide our services that will enable our business to contribute meaningfully towards economic progress.

I would also like to express my gratitude to our customers for their continued support and trust. Finally, I would like to thank our employees, whose hard work at every level of the business has allowed us to deliver strong performance.

Arpit Vyas

Managing Director & CFO

Global CEO's Message

Mark Griffiths
Global CEO & Member of the Board

>30%

OPERATING MARGIN OF CRAMS BUSINESS

Dear Shareholders,

It is indeed my pleasure to present your Company's performance for FY2018 as the Global Chief Executive Officer. The year under review has been a successful one as we grew our business, increased profitability and advanced our key strategic initiatives. This enabled us to improve our competitiveness and enhance the value delivered to our shareholders.

During the year, we demonstrated the stability of our business model and also showcased our resilience with consistent topline and bottom line growth. Our strategies have made us increase our focus on product differentiation, a relatively uncrowded space, that will continue to be our mainstay. We will simultaneously continue to invest in R&D for development of products and solutions that will also be targeted for the developed markets.

High-Margin CRAMS and Vitamin D analogues Business

Our venturing into the CRAMS space has enabled us assist drug innovators in development and optimisation of processes for novel drug molecules in various stages of the development process. We are focusing on CRAMS and Vitamin D analogues business which are highly profitable on a sustainable basis for the group. With our expanded capacities in the CRAMS space, we are strongly placed to benefit from the significant growth that we are seeing in the global CRAMS industry. The Vitamin D analogues business has turned out to be extremely profitable for us on account of the change in business strategy that was undertaken in Dishman Netherlands about 4-5 years back. We continue to benefit from the extremely complex, difficult to manufacture Vitamin D analogues business.

Our capabilities across the CRAMS value chain has helped us earn an edge in the marketplace. Our strong chemistry skills and large scale multi-purpose manufacturing capacities helps us to invest our energies into some of the most complex and niche molecules for development. Our rich pool of scientists has been diligently working on innovative technologies and best in class processes in order to successfully develop first of their kind APIs, which would help our customers to bring the final products to

the market. The HiPo facility at Bavla, the largest in Asia, enables us to gain from the high-margin HiPo opportunity in the oncology and other highly potent compound space.

Under Dishman India, we are a global and reliable outsourcing partner to the industry, offering a portfolio of development, scale-up and manufacturing services, providing a wide range of development and manufacturing solutions at locations in Europe and India. In this business, we remain committed to deliver high value added solutions with technical excellence.

Our High Potency Capability

We have invested in world class facilities and state-of-the-art infrastructure and optimised each site with the necessary equipment. This helps us provide an unparalleled analytical support for research, development and commercial production of late stage intermediates and APIs. With 14 years of HiPo API experience, our HiPo API business represents a significant opportunity for us to enable top and bottomline growth.

During the year, we improved our capacity utilisation at our manufacturing facilities by focusing more on small and medium-sized companies. We also efficiently utilised the HiPo facility, and other facilities.

Moving ahead, we believe our rich parentage and deep sector understanding will continue to help us deliver sustainable growth.

I would like to end by expressing my gratitude to all our customers, teams, investors, bankers, regulators and shareholders – for the trust they have reposed in us. We thank all those who have accorded their support to us. We feel privileged to welcome every new member to accompany us on this exciting and profitable journey.

Best Wishes,

Sincerely,

Mark Griffiths

Global CEO & Member of the Board

**WE ARE A GLOBAL AND RELIABLE
OUTSOURCING PARTNER TO THE
INDUSTRY, OFFERING A PORTFOLIO
OF DEVELOPMENT, SCALE-UP AND
MANUFACTURING SERVICES, PROVIDING
A WIDE RANGE OF DEVELOPMENT

EUROPE AND INDIA.**

Board of Directors and Leadership Team

Mr. Janmejy R. Vyas
Chairman & Managing Director

Mr. Vyas promoted the erstwhile parent company Dishman Pharmaceuticals and Chemicals Ltd (DPCL) in 1983 with 19 subsidiaries worldwide. He heads the R&D and production activities over 30 years and is also engaged in marketing of in-house technologies and products, research and production capabilities domestically and internationally. He has been managing marketing and globalisation activities since more than 30 years and has successfully negotiated several contract research proposals

with clients. He has entered into a long-term manufacturing and supply contract with several companies in Japan, USA and Europe. In 1987, he set up the Naroda facility, and later in 1996, initiated the expansion of Bavla facility. His emphasis on quality and adherence to international manufacturing standards ensured the Bavla facility has been set up and developed as per international standards. He has been engaged in acquisition of several research-oriented companies, including Carbogen Amcis and Vitamin D business in Netherlands.

Mrs. Deohooti J. Vyas
Whole-time Director

Mrs. Vyas holds a Bachelor's Degree in Science. She has very rich experience in the field of Administration and Human Resource Development. She has been associated with

the Dishman Group since a long time. She has been extremely instrumental in strategic decision making in the HR policies of the Company.

Mr. Arpit J. Vyas
Managing Director & CFO

Mr. Vyas has completed his Chemical Engineering degree from the University of Aston, Birmingham. He has gained a rich experience in the field of Marketing. He was first appointed as the Additional Director of the erstwhile DPCL, and thereafter as the Whole-time Director w.e.f. 1st June, 2009 and then as Managing Director since 28th May,

2013 and also appointed as CFO w.e.f. 17th July, 2015. He has been extremely instrumental in the strategic decision-making processes and Marketing Policies and the overall operation of the Company's plants worldwide. He is completely in charge of the corporate functions such as finance, legal, IT, marketing, sales, etc.

Mr. Mark Griffiths
Director & Global CEO

Mr. Griffiths holds a Master's Degree in Science (Mechanical Engineering) from the University of Bristol. He has extensive background within the Pharma industry and has strong leadership skills. He has more than 35 years of experience in Strategy, Business Operation, Facility & Plant Engineering Design for pharmaceutical and

chemical plants. Before joining the Dishman Group as Global CEO, he was the co-founder and joint owner of COSAM Developments Ltd., a multi-discipline pharmaceutical consultancy firm. He has been inducted on the Board from August 2014.

Mr. Sanjay S. Majumdar

Director

Mr. Majumdar has a rich experience of over 30 years as a Practicing Chartered Accountant. He is the Proprietor of the firm M/s. Sanjay Majumdar and Associates and also a Partner with M/s. Parikh & Majmudar. He has been the Chairman of the Editorial Committee of the Ahmedabad Chartered Accountants

Association Journal in 1994-95. He has also been a Chairman of the NRRC Committee of the Chartered Accountants Association, Ahmedabad during 2000-01 and 2002-03. He has gained extensive experience in the areas of Finance, Corporate Law, Direct Tax and Auditing & Accounting.

Mr. Ashok C. Gandhi

Director

Mr. Gandhi has a wide and rich experience as the Senior Advocate. He is also a Partner with M/s. C. C. Gandhi & Co., Advocates, which is an eminent and reputed firm based in Gujarat. He has extensive experience and expertise in

the field of Corporate Law. Currently, he holds the position of Trustee in various Trusts having benevolent objects. He is also a Member and President of various Societies and Committees.

Mr. Rajendra S. Shah

Director

Mr. Shah is a Mechanical Engineer and the Chairman of Harsha Engineers Limited, which commenced operations in 1972 and manufactures bearing cages of any material and auto components. He is recognised as the "Best Entrepreneur 2001" by the Ahmedabad Management Association, Ahmedabad. He is

serving as a President of the Society for The Welfare of The Mentally Retarded, a parents organisation working for Welfare of Mentally Challenged Children, running under the name "AASTHA" a vocational rehabilitation center for mentally challenged persons having age above 21 years.

Mr. Subir Kumar Das

Director

Mr. Das has 36 years' experience in commercial banking, superannuated as Chief General Manager (HRM) from Bank of Baroda (BOB). He was also Advisor (HR) to CMD, BOB. Mr Das is Advisor and Faculty with McKinsey & Company in HR and BPR areas. He is visiting faculty in NIBM Pune and various management institutes. He conducts sessions on Managing Change,

Innovation, HR Management, Leadership etc. Mr Das is Director in Smemavens Foundation, a not for profit organisation, is responsible for imparting training and mentorship to small and medium enterprises in areas like management of finance, managing growth / expansion, emerging opportunities etc. Mr Das is MBA(Finance), MSc(Chemistry) and CAIIB.

Leadership Team

Global Team

Mr. Mark Griffiths - Global CEO

Dr. Alan Fischer - Global Chief Information Officer

Mr. Dieter Thueer - Global Head - Human Resources

Mr. Pascal Villemagne - VP - Commercial

Mr. Martin Schneider - Global Chief Quality Officer

India Team

Mr. Bharat Padia - Executive Director

Dr. Himani S. Dhotre - Sr. VP (R&D) & CEO (Bavla Plant)

Mr. Harshil Dalal - Sr. VP (Finance & Accounts)

Mr. Jayesh A. Shah - VP (Production) & CEO (Naroda Plant)

Mr. Dharmesh Desai - DGM (Legal & Secretarial)

Future Growth Aided by Rising Demand in Oncology

15

OUR MOLECULES IN LATE PHASE 3

WE HAVE CREATED A DEDICATED HIPO FACILITY AT BAVLA, NEAR AHMEDABAD, GUJARAT. WE FORESEE OUR HIPO SALES GROWING SUBSTANTIALLY WITH A CURRENT PIPELINE OF 15 MOLECULES IN LATE PHASE 3, OF WHICH 50% ARE IN ONCOLOGY THERAPY.

We are focusing on the Oncology segment (currently 45% of our CRAMS sales), a market which is expected to grow at pace faster than other segments. This is one of the most critical therapeutic segments, driving the global spend in medicines, projected to grow at a CAGR of 9% to 12% over CY2016-21(E) by IMS. Considering the overall pharmaceuticals sales of ~US\$ 194 billion at risk from CY2016-22 due to patent expiry and increasing risk from biosimilars, the pure oncology segment is expected to grow at a CAGR of 12.7% during the same period, considering sales to touch US\$ 192 billion by CY2022.

The global HiPo API market is growing faster than the normal API market. From US\$ 16.02 billion in CY2016, the market is projected to grow to US\$ 25.86 billion by CY2022. Oncology is the key driver of growth in this segment, contributing 60% of the HiPo API portfolio. Innovators, too, have a keen focus on the oncology segment, contributing ~28% of Phase II/III clinical trials. Oncology requires highly potent drugs which are effective at much smaller dosages, with the ability to target only the diseased cells.

Currently, there are ~96 contract manufacturing organisations and contract development and manufacturing organisations worldwide, with more than 130 facilities. Of this, ~40% are dedicated to the production of HiPo API and cytotoxic drugs. The segment is most promising as India and China cumulatively account for 33% of the total API business and ~5% of the global HiPo API. But with more companies dedicating energy for the development of the HiPo API facilities, India and China are together seen capturing ~15% of the market by CY2026.

PICK-UP IN CRAMS BUSINESS AND GROWING ORDER BOOK

WE OFFER SERVICES ACROSS THE CRAMS VALUE CHAIN - FROM BUILDING BLOCKS TO COMMERCIALISATION STAGE - HAVING INVESTED AGGRESSIVELY IN OUR DEVELOPMENT AND MANUFACTURING CAPACITY. OUR STRATEGY OF "ONE COMPANY, TWO BRANDS" IS HELPING US BUILD OUR CRAMS PORTFOLIO, WITH A DIVERSIFIED RESOURCE BASE AND DEEPER CLIENT RELATIONSHIPS.

We are a full-fledged CRAMS partner for global pharma Innovators and are building up our portfolio, working across 450+ molecules. We offer services across the CRAMS value chain – from building blocks to the commercialisation stage and have invested aggressively in our development and manufacturing capacity.

More than 60% of our portfolio comprises of small pharma companies, indicating an improvement in our client base. Repeat orders contribute about 75% of our total business. Our top 5 customers – Mylan, Abbott, Johnson & Johnson, Novartis and Celgene – contribute 19% of total sales. We follow a strategy of engaging more with "large to small" innovators and mid-sized biotech companies.

Contribution by CRAMS

CRAMS-India accounts for 14% of total sales, with overall EBITDA margins of 54% in FY 2018. CRAMS-CA contributes for 60% of Total sales, with overall EBITDA margins of 20.2% in FY 2018. CRAMS-UK contributes 3% of CRAMS business and enjoys EBITDA margins of 23%. During FY2011-18 our CRAMS business grew from ₹ 655 crore to ₹ 1,294 crore lead by growth of expanded capacity and increased order book from Carbogen Amcis and Dishman India.

Our China operations mainly support the requirements of Carbogen Amcis. This has finally turned profitable at the EBITDA level with improving capacity utilisation. Currently, capacity utilisation at the China facility stands at only 30%. Post approvals from other regulatory agencies, and post completion of its inspections, the supplies to third parties will be a strong catalyst for the improvement for better operational efficiencies in China.

We have a strong CRAMS order book of US\$ 130 million, while Carbogen Amcis continues to have a strong pipeline of CHF 90 million. In order to meet the ongoing demand from customers in the R&D space, we have invested in a facility close to our current Bubendorf, Switzerland facility to cater to such requirements. This facility will be operational from Q2 of FY2019, and will add to the overall sales.

Key Triggers for CRAMS Business

We have a strong overall order book of US\$ 130 million (US\$ 90 million to be completed by FY2019 at Carbogen Amcis). We have a strong pipeline in Phase III which is expected to get commercialised. The plant continues to run at full capacity, while revenue contribution has increased from 58% to 60% with allocation of a dedicated capex of US\$ 20 million, we expect further ramp up the R&D activities. We expect commercial supplies of two recently commercialised molecules and a ramp-up in supplies of oncology products from the HiPo API facility, oncology focus to get additional contracts especially for the HiPo facility and shift of portfolio to the high-margin contracts.

The segment's margin in FY2018 stood at 27% due to the higher margin commercial production projects. The future pipeline remains strong for the Company, with a renewed focus on high margin projects. With several products in the pipeline to be launched in the next couple of years by US customers, we expect US portion of total sales to be significantly higher from the current levels. Currently, the company has ~15-16 molecules in late Phase 3, thus giving a high possibility of some converting to commercial launch. Among the late stage molecules, a significant number of molecules have been filed by the innovators for regulatory approvals.

Growth drivers in CRAMS:

- » Increase in the number of niche APIs for development projects
- » Strong pipeline in Phase 3, converting to commercialisation
- » Oncology and other highly potent compound focus to get additional contracts especially for its HiPo facility
- » Better utilisation of plants, especially in Shanghai
- » Shift to high margin contracts portfolio

Mix of Marketable Molecules to Improve Margins

28%

OPERATING MARGINS IN MARKETABLE
MOLECULES SEGMENT

WE ARE PROJECTING THE MARKETING MOLECULES BUSINESS TO GROW, BACKED BY INCREASED DEMAND FOR VITAMIN D ANALOGUES. SHIFT ON THE DISTRIBUTION MODEL FOR NETHERLANDS CHOLESTEROL BUSINESS IS ALSO IMPROVING OUR REALISATIONS AND MARGINS.

The Marketable Molecules (MM) vertical has four sub-segments – generic APIs, specialty chemicals (QUATS), vitamins & chemicals and disinfectants. We restructured our portfolio and exited from the formulation of low-margin Vitamin D products to high margin Vitamin D analogues. We are now focused on Calcifediol and Calcitriol, which are highly concentrated Vitamin D analogues and the uses are more diverse. Our Dishman Netherlands business profitability has grown from 20% in FY2015 to 38.2% in FY2018. Moreover, with the focus on niche generic APIs (especially oncology), this is likely to support future growth.

The overall margins for Marketable Molecules stands at ~33-35%, higher than 28% in FY2015. Vitamin D analogues business continues to account for ~52.6% of total sales, with margins of 38.2% in FY2018. With the focus improvement on the margins, we are aiming to forward integrate the Vitamin D analogue business into development and manufacturing of finished dosage form over the next 12-24 months.

Key Triggers for Marketable Molecules Business:

- » Vitamin D analogues picking up with sustained EBITDA margins
- » Forward integrating Vitamin D analogues into finished dosage formulation
- » Filing DMFs for niche generic APIs
- » Focusing on the high margin products within marketable molecules in India

Healthy Balance Sheet and Strong Financials

WE HAVE SUFFICIENT SURPLUS LIQUIDITY IN THE FORM OF SHORT-TERM AND LONG-TERM INVESTMENTS AS WELL AS BANK BALANCES TO MEET UPCOMING LIABILITIES, AN IMPORTANT DETERMINANT OF FINANCIAL HEALTH. GOING FORWARD, AN IMPROVED PRODUCT MIX, CAPACITY UTILISATION, COMMERCIAL MANUFACTURING OF SOME APIs FOR A HIGH-MARGIN PRODUCTS AND FINANCIAL COST SAVINGS WILL FURTHER IMPROVE EBITDA MARGINS.

76%

SHARE OF CRAMS SEGMENT IN TOTAL REVENUE

At Dishman Carbogen Amcis Limited, we are a financially robust and a fully-integrated company, with an excellent growth outlook. During FY2018, we reported significant operating cash levels, which indicates that we put our borrowings and cash accruals into good use.

Our change in strategy to focus on only margin restricted orders helped us improve our EBITDA margins, in spite of taking a dip in the orders. We expect our revenues/ EBITDA/Net Profit to grow over FY2017-20(E) on the back of better utilisation of capacities, increased revenues from high-margin HiPo APIs and Vitamin D analogues. The share of our Marketable Molecules business has been declining from 36% in FY2013 to 24% in FY2018.

Moving ahead, an improved product mix, capacity utilisation, commercial manufacturing of some APIs for a high-margin products and financial cost savings will help us further improve our EBITDA margins.

We project a rise in total sales and earnings CAGRs, driven by a strong CRAMS pipeline and improved MM product mix. The CRAMS segment continues to increase its share from 64% in FY2013 to 76% in FY2018. This along with our focus on highly profitable Vitamin D analogues business is leading to better EBITDA margins which have gained by 265 basis points (bps) over the same period of time. Currently, Dishman has an order book of US\$ 130 million for CRAMS segment, out of which Carbogen Amcis order book would account for ~CHF 90 million.

Our Key Strategies in Play

75%

REPEAT CUSTOMERS FROM TOTAL ORDER BOOK

OUR STRATEGIES OF GROWING OUR SHARE OF SMALL AND MID-SIZED PHARMA INNOVATORS AS OUR CUSTOMERS IS HELPING US TO HAVE A DIVERSIFIED CUSTOMER BASE AND NOT BE DEPENDENT UPON A FEW LARGE PHARMA COMPANIES FOR DRIVING OUR GROWTH.

1 Niche molecules under development

In line with our philosophy of working towards development of molecules, to address the huge gap between demand and supply of new chemical entities, we are continuously striving towards adding niche molecules for development. The Company has identified five key therapeutic areas where it will retain its focus on oncology, ophthalmics, cardiovascular, CNS and any orphan drug. The Company assesses based on complexity, catering to the society's unmet needs, and if it meets minimum gross margin requirements before undertaking development. One of the keys to success is to add more niche molecules to its product basket, and to keep investing in fixed assets and people.

2 Sale of commercialised molecules

Some of the potentially large new chemical entities, the APIs for which were successfully developed, received

approvals from the regulatory authorities over the last 2-3 years. In our experience, we have seen the commercial quantities increase significantly within 3-4 years of the launch. Hence, we expect these molecule sales to ramp up in the next 1-2 years. Moreover, some of the older commercial molecules could also see an increase in demand, and drive up sales of APIs.

3 Rising number of commercial launches

With focus on oncology, cardiovascular, central nervous system, ophthalmology (ophthal) and orphan drugs, the possibility of their commercial launch is higher, with a pipeline of over 400 molecules. E have 16 molecules in late Phase III, which leads us to believe that the next 3-4 years look promising for commercial launches. We expect 1-3 products to be commercialised every year, which will accelerate growth and de-risk earnings from block-buster products. This will drive further growth and profitability, and reduce dependence on existing commercial molecules, leading to lower earnings risk.

4 Global demand in oncology

We are focusing on Oncology, one of the most critical therapeutic segments driving global spend in medicines. The segment is projected to grow at 9-12% CAGR over CY2016-21(E). Given the overall pharmaceuticals sales of ~US\$ 194 billion at risk from CY2016-22, the segment is seen growing at 12.7% CAGR, considering sales will reach at US\$ 192 billion by CY2022.

5 Global footprint to increase access

Our top 5 customers account for ~19-20% of our total business and 75% of our business is from repeat customers. We have received USFDA approval for Bavla, Naroda, Switzerland and Netherlands based facilities. We expect that in due course of time, our Shanghai facility will also undergo USFDA inspection after which it will become an alternate API manufacturing site within the Group.

Our Global Footprints

WE ARE A FULLY-INTEGRATED CRAMS PLAYER WITH GLOBAL PHARMA INNOVATORS AND A GLOBAL PRESENCE.

Our Manufacturing Plants:

- » 4 in Switzerland
- » 2 in India
- » 1 in UK
- » 1 in France
- » 1 in China
- » 1 in Netherlands

Inclusive Growth for All

THE CORPORATE VALUES AT DISHMAN GROUP EPITOMISE OUR VISION TO HELP ACHIEVE INCLUSIVE GROWTH FOR ALL. WE CONTINUE TO DELIVER CONSISTENTLY ON THE EXPECTATIONS AND NEEDS OF OUR WIDER STAKEHOLDER FRATERNITY ACROSS OUR OPERATIONS. WE SEEK TO STRENGTHEN OUR INITIATIVES THROUGH A FOCUS ON PARTNERSHIP, INNOVATION AND IMPACT TO CREATE SUSTAINABLE VALUE FOR THE COMMUNITY AT LARGE.

A Sanitation, Clean Water and Mid-Day Meal

With the children spending long hours in school, the physical environment and cleanliness of the educational facility significantly determines their health and well-being. We provide better sanitation to about 50 schools, with clean water access, better infrastructure, library, sports equipment and mid-day meal shades.

B Quality and Value-based Education and Health & Hygiene

Through a full-time fellowship program with Yuva Unstoppable, we are supporting 15 bright people who are working at the grassroot level to build a foundation for "Unstoppable India". These young people teach the basic curriculum and also inculcate the right values in the students.

C Digital Classrooms for E-Learning

We have developed smart classroom facilities in Government schools, which is increasing the enthusiasm in students about attending school regularly. Also, digital learning benefits all types of learners as the content is presented visually or orally and with differently sized fonts and colours.

Benefits of Digital Learning:

- Accesses to online methods for better understanding of students
- Digital medium for notes enable teachers make use of PowerPoint or Word and also directly share the content with students
- Lessens the worry of School Absentees and they acquire the notes in soft copy from the teacher or a classmate
- Ease of understanding – Few topics are difficult to be understood with use of words and blackboard. But with smart class, any topic can be explained in an interesting manner.
- Smart classes make learning fun and enjoyable
- Improves academic performance by building the base for students
- Use of e-resources and digital projectors teachers allergic to chalk and markers

A man with glasses and a white shirt is smiling and making a peace sign. Behind him are three children, two girls and one boy, also making peace signs. They are in front of a banner that has "FESTIVAL" and "FIGHT" visible. The background shows trees and a building.

128,000

MAN HOURS
PRODUCTIVE MANHOURS SAVED BY TEACHERS/YEAR

D Women Empowerment

We shortlist deserving girl students from Government schools to guide and mentor them for higher studies. With this, we not only empower them, but also make their families realise the importance of having a girl child. This not only makes these girls feel proud, but also provides an inspiration to continue educating girls.

E Maintenance and Management Program

We run maintenance programs for students and teachers by teaching them the significance of cleanliness. Our supervisors also conduct training sessions on hygiene and menstruation for the girl students at these schools.

Outcome and Impact:

Heads	Before	After
Overall hygiene level with clean toilets, campus and classrooms	40%	89%
Privacy in washrooms (Installation of shades and doors)	28%	88%
Water Test-Clarity	4 NTU	<1 NTU
Water Test-Color	6 Hazen Unit	1 Hazen Unit
Satisfaction with school ambience	38%	89%
Effective utilisation of space with playground, eating area, cooking area, and area to host event)	16%	89%
Attendance	49.5%	78%
Educational benefits through resources	37%	93%
Digital literacy	11%	66%
Sports participation	40.10%	79.35%
Public speaking	26%	45.91%

Management Discussion & Analysis

GLOBAL GROWTH IS EXPECTED TO TICK UP TO 3.9% IN 2018 AND 2019, SUPPORTED BY STRONG MOMENTUM, FAVOURABLE MARKET SENTIMENT, ACCOMMODATIVE FINANCIAL CONDITIONS, AND THE DOMESTIC AND INTERNATIONAL IMPACT OF THE EXPANSIONARY FISCAL POLICY IN THE UNITED STATES.

Economic overview

Global Economy

World growth strengthened in 2017 to 3.8%, with renewed traction in global trade. It was driven by an investment recovery in advanced economies, continued strong growth in the emerging markets of Asia, a notable upswing in emerging Europe, and signs of recovery in several commodity exporters. Global growth is expected to tick up to 3.9% in 2018 and 2019, supported by strong momentum, favourable market sentiment, accommodative financial conditions, and the Domestic and International impact of the expansionary fiscal policy in the United States.

Once the cyclical upswing and US fiscal stimulus will run their course, prospects for advanced economies will tone down, given their slow potential growth. In emerging market and developing economies, in contrast, growth will remain close to its 2018-19 level as the gradual recovery in commodity exporters and a projected increase in India's growth, will offset China's gradual slowdown and emerging Europe's return to its low-rung growth rate. The per-capita growth rate of 40 emerging markets and developing economies are projected to be lower than advanced economies because of the inability to bridge the income gaps vis-à-vis the group of more prosperous countries.

(Source: IMF World Economic Outlook Report, April 2018)

Indian Economy

The Indian economy continues to be the flag-bearer for economic expansion in the global landscape. As per the World Bank, a swift increase in economic activity across lower income groups and the underlying population growth will help India overtake Germany to become the 4th largest by 2020, trailing only the United States, China and Japan. The Government made significant progress on important economic reforms, which will support strong and sustainable growth, going forward. In particular, the implementation of the Goods & Services Tax (GST), will help raise India's medium-term growth by enhancing the efficiency of production and movement of goods

and services across states. The Central Statistics Office (CSO) estimated India's economy to have risen by 6.7% in FY2018, compared with 7.1% in the previous fiscal year of FY2017. Average Consumer Price Inflation (CPI) was 3.6%, compared to 4.5% in the previous year. Assuming a normal monsoon and no major policy reforms, CPI is estimated to remain stable, going forward. However, key risks to the inflation outlook are rising crude oil and other commodity prices.

Looking ahead, India's economic growth seen gathering momentum in FY2019, benefitting from a conducive domestic and global environment. The factors that are expected to aid the economy in achieving stronger growth are effective implementation of GST; improved credit off-take; large resource mobilisation from the primary market strengthening investment activity; and acceleration of global trade growth. In line with a positive economic development outlook, the International Monetary Fund (IMF) has projected India's economic growth to improve to 7.4% in FY2019.

Industry Overview

Global Pharma Sector

Global health is poised to meet a series of key turning points, and changes seen in 2018 will mark the key inflections that drive the outlook for the next five years and

beyond. The types of medicines being developed, the way technology contributes to health and how the value of healthcare is calculated are all changing, markedly.

In recent years, concerns about escalating medicine costs have captured significant attention. In 2018, some of the key drivers of medicine spending growth appear to be slowing spending rather than driving it upward. The causes of slowing growth are directly linked to payers' concerns about budgets and to newly emerging mechanisms to adjudicate value and thus limit the potential for out-of-control spending growth.

In 2018, between five and eight Next Generation Biotherapeutics will be approved and launched. Over the next five years, 20% of the 40–45 New Active Substances (NAS) projected to be launched each year will come from this group of drugs. The pipeline of 142 next generation drugs in late-stage research represents just five percent of ongoing late stage research but will be more successful than other areas and will reach the market in large numbers.

As next-generation treatments become more common, health system budget pressures will increase, and payers will likely limit or reject access to these drugs as they impact budgets. How cell- and gene-based therapies and regenerative medicines are priced and how they

Management Discussion & Analysis

are paid for will need to evolve to enable predictability for reimbursement agencies (such as governments and private insurers) and to smooth their financial impact.

In 2018, telehealth visits may increase by 15-40% and account for 35 to 42 million visits, nearly double the steady level seen from 2013—2016. By 2022, if the pace of adoption continues to accelerate, as many as 7.5% of visits would be telehealth, while even modest continued growth would see telehealth 50% larger than current levels in five years. In 2018, virtually all large private employers will offer telehealth services to their beneficiaries and begin to offer even larger financial incentives to use them, and many are promoting them with television campaigns. For many larger employers, telemedicine is shifting from a convenience perk for employees to a replacement for some primary care and urgent treatments and is being incentivized with low or no co-pays and a greater focus on the patient experience. Varying sources suggest that telehealth is available to between 40% and 90% of privately insured beneficiaries in the United States, but very few patients currently use these services. Overall, the addressable market of ambulatory visits that could be shifted to a lower-cost venue is approximately 400 million visits per year, which includes ER, urgent care and primary care visits that could be shifted from in-person to telehealth visits.

Source: IQVIA – 2018 & Beyond – Outlook and Turning Points

Global Medicine Spend

In 2018, net brand spending will decline in developed markets by 1-3%. This has the effect of reducing net spending overall on brands in developed markets by approximately US\$ 5 billion to a total of US\$ 391 billion in 2018. Over the next five years, net brand spending will remain flat, despite the expected entry of new, branded medicines; the overall impact on payers being the same in 2022 for brands as in 2017. The next five years from 2018 to 2022 will see: Patent expiry impact will be 37% larger than the prior five years, including both small molecule and biologics; the peak year of impact is expected to be 2020 when spending on brands that no longer have exclusivity will be reduced by over US\$30 billion across the ten developed markets.

New medicines growth will be slower in 2018–2022 than the period from 2013-2017 (see Exhibit 9) but growth from new medicines will still be above the 2008–2012 average. In prior years new drugs accounted for 2-3% of brand spending, with notable exceptions for over nearly 7% in 2015 when new hepatitis C drugs were widely used. From 2018-2022 there will be 40-45 new active substances launched per year and new medicines growth will drive 2.5% to 3.5% of brand spending in developed markets. Net price levels for branded drugs will rise modestly in the United States at 2% to 5% per year but will fall in other developed markets. Volume for existing branded and generic medicines will remain slow, with the ongoing shifts towards newer medicines over time.

Source: IQVIA – 2018 & Beyond – Outlook and Turning Points

Developed Markets – US & Europe

Medicine spending growth in the U.S. had been slowing steadily since 2001, but rebounded sharply in 2014 and 2015 due to a lower level of patent expiry impact, historically high price increases for both brands and generics and the historic impact of breakthrough cures for Hepatitis C. Hepatitis C treatments alone accounted for

3% of the 12% growth in 2015, but are projected to decline slightly in 2016 and then grow modestly to 2021. In addition to these new breakthroughs, the last 2–3 years have seen a substantially higher level of spending on innovative drugs in other disease areas including cancer, autoimmune diseases, multiple sclerosis (MS) and diabetes. The removal of Hepatitis C as a significant growth driver in 2016, along with the increased level of patent expiry impact, have combined to reduce the growth rate by half.

Source: QuintilesIMS – Outlook for Global Medicines through 2021 – Dec 2017

Specialty Medicines Spending and Growth in Developed Markets

Source: IQVIA Market Prognosis, Sep 2017; IQVIA Institute, Oct 2017

Medicine spending in Europe will increase, at the pre-rebate/discount/list-price level from US\$151.8 billion in 2016 to US\$ 170–200 billion in 2021. Growth in the region will be 1% to 4% to 2021, as the U.K. grows (pre-rebate) at a rate of 4% to 7%, Italy and Spain grow at 1% to 4%, France tightly controls growth at (–1)–2% and Germany grows at 2% to 5%. Across the countries, 2015 saw the devaluation of the Euro and the British Pound to the U.S. dollar, reducing spending on a U.S. dollar basis by 8.3% from US\$ 164.7 billion in 2014 to US\$ 151.0 billion, but increasing by 7.7% on a constant US\$ basis, which excludes exchange rate effects. The specific devaluation is not tied to nor specifically impacting pharmaceutical usage or spending, however macroeconomic challenges

do influence government policies to some extent, especially considering the impact on the value of the British pound to the Euro and other currencies following the BREXIT referendum result.

Pharmerging Markets

Pharmerging markets will be driven by volume changes and the use of generics and will grow by 7% to 8% in 2018, down from the 9.7% compound annual growth rate over the prior five years and marking the third year that growth will be less than 10%. The pharmerging markets are projected to grow by 6% to 9% to US\$ 345–375 billion by 2022. China is the largest pharmerging country but will

Management Discussion & Analysis

grow by only 5% to 8% over the next five years to reach US\$145-175 billion in 2022. Decelerating spending growth in China, Brazil, India and Russia mirrors slowing economic growth in these countries; this impacts medicines given high patient out-of-pocket costs. Of importance in China is the new Generics Quality and Efficacy Evaluation guidelines which are intended to drive the registration and development of bioequivalent generics. Currently, off-patent originators account for about 18% of spending in China and estimates range from 50% to 85% of that spending could shift to bioequivalent, locally produced generics within the next five years.

Source: IQVIA – 2018 & Beyond – Outlook and Turning Points

The volume of the use of medicines is projected to increase by a 3% compound annual growth rate globally in the next five years compared to 6% from 2006–11 and 3% from 2011–16. The global volume will have increased from nearly 2.5 trillion doses of medicines (standard units) in 2006 to almost 4 trillion doses in 2016 with ¾ of that growth from pharmerging markets. The rest of the world

Pharmerging Spending and Growth

Source: IQVIA Market Prognosis, Sep 2017

Pharmerging Medicine Spending and Volume by Type, 2022

Source: IQVIA Market Prognosis, Sep 2017; IQVIA Institute, Oct 2017

in aggregate, including developed countries and 190 other countries around the world, will see essentially unchanged per capita rates of medicine usage over the next five years. Pharmerging markets will continue to expand access and usage of medicines at a rate of approximately 4% per year compared to a projected population growth rate of 0.8%.

Oncology

More than 700 cancer drugs are in late-stage development – up over 60% from a decade ago. Over one-third of trials are using biomarkers to stratify patients, pointing to even more personalised (and effective) cancer treatments in the future. The pipeline of immunotherapies is particularly active and includes almost 300 molecules with 60 separate mechanisms being evaluated in Phase 1 or Phase 2 clinical trials, which is a significant jump from the four mechanisms of such drugs in Phase 3 trials or under regulatory review. These immunotherapy trials are being conducted across 34 different tumour types, indicating the broad-based application of this new approach to cancer treatment.

In pharmaceuticals, the rise of immuno-oncology, cell and gene therapies are generating significant early clinical results, while other small molecule mechanisms such as RNA interference (RNAi), and inhibitors of dozens of other pathways with small molecule drugs are in development and show promise. In medical technology, surgical robots, 3D bio-printing of tissues and improved medical imaging all promise to enhance cancer care, though how widely adopted they will become remains unclear. The exploding volumes of real-world data shows the prospect of finding expanded use in regulatory submissions, better tracking patients with open cancer registries, and enabling artificial intelligence to help with diagnosis, treatment selection, and even drug discovery. The global market for oncology therapeutic medicines will reach as much as US\$ 200 billion by 2022, averaging 10% to 13% growth over the next five years, with the U.S. market reaching as much as US\$ 100 billion by 2022, averaging 12% to 15% growth.

Growth Rate for Global Oncology Therapeutic Medicines Spending

Source: IQVIA, MIDAS, Dec 2017

Outlook for Oncology

- Advances in technology and the use of information will act as driving forces that will impact oncology treatment and costs over the next decade. Mobile cancer apps are already available and being used by patients across a wide number of cancer types, albeit in small numbers.
- Cancer apps are being used across the patient journey from prevention to survivor support. Apps are also being incorporated into clinical trials as an adjunct to other interventions, or for validation purposes.
- Limited efficacy evidence has been published to date from clinical trials incorporating digital health tools in oncology, but 15 studies published in 2017 showed positive impact across a range of uses.
- The growing availability of real-world evidence will result in a growing number of uses as all stakeholders look to improve their decision-making in the appropriate use of oncology medicines and management of costs.
- The global market for oncology therapeutic medicines will reach as much as US\$ 200 billion by 2022, averaging 10-13% growth over the next five years, with the U.S. market reaching as much as US\$100 billion by 2022, averaging 12-15% growth.

Contract Research & Manufacturing Services

Global CRAMS Market

The global pharmaceutical and bio-pharmaceutical CRAMS market has been growing year on year, with an increasing emphasis on generic alternatives from developed countries. Global pharmaceutical companies are focusing on marketing and discovery, and are outsourcing drug development, clinical trials and manufacturing. Contract services such as manufacturing and research are advantageous to both parties as they provide the supplier with financial stability for the duration of the contract. They also provide the benefit of cost savings, time saved in operating and managing a production facility. Branded

THE GLOBAL MARKET FOR ONCOLOGY THERAPEUTIC MEDICINES WILL REACH AS MUCH AS \$200 BILLION BY 2022, AVERAGING 10-13% GROWTH OVER THE NEXT FIVE YEARS, WITH THE U.S. MARKET REACHING AS MUCH AS \$100 BILLION BY 2022, AVERAGING 12-15% GROWTH.

drugs worth ~US\$ 105 billion in annual sales in US are expected to come off patent until CY2020. Due to many drugs going off-patent, the top-line growth of pharma companies is expected to come from generic drugs than from patented ones. Hence, pharma companies would be expected to enhance the allocation to R&D to increase the drug pipeline.

Outsourcing in Pharma Sector

Outsourcing has become a viable and beneficial business strategy that is enabling firms to transfer non-core activities to external partners. This helps restructure their distribution networks, leverage resources, spread risk and focus on issues imperative to their survival, competitive advantage and future growth. Out-sourcing is also important in overcoming trade barriers and is used to gain entry into a foreign market. Increasing price and cost pressures and patent expiries are leading to shrinking margins in the pharmaceutical industry.

Indian CRAMs Market

The Indian Contract Research and Manufacturing Services (CRAMS) players are expected to register strong growth rate of 18% to 20% CAGR to touch US\$ 18 billion size by 2018, more than double of US\$ 7.6-7.8 billion in 2013. This would be achieved on the back of recovery in the US market and US\$ 85 billion off-patent drug opportunity by 2020, according to a report by Care Ratings. With the Indian crams industry gradually moving up the value chain and players investing in better technology and higher capacities, manufacture of value-added products for biotech and specialty therapy areas may be outsourced to Indian players in future. India is one of the world's best known low-cost manufacturing centres, with highest number of US Food and Drug Administration (FDA)-approved manufacturing plants outside the US.

The rise of Indian drug and pharmaceutical industry IDPI in the world pharmaceutical map can be ascribed to the move from product to process patent after 1970. The cutting-edge cost advantage has already resulted in more than 50% of the revenue of Indian Pharmaceutical industry coming from overseas markets. Added to that, innovation

in functional distribution and marketing has given a new dimension to the shared services model in India.

Why is India the preferred place for Contract Manufacturing:

- Rising cost of research in developed markets
- Increase in number of drugs going off-patent
- Preference to Indian players due to large generic mix
- Availability of English-speaking, low-cost and highly-skilled professionals

Key Growth Drivers for Contract Manufacturing in India:

- Dwindling profit margins in highly competitive global pharma marketplace
- Growing demand for generic drugs; patent expiration of major therapeutic brands
- Demand for up-to-date processes
- Need for high-quality R&D facilities and cost-effective production technologies
- Government initiatives in healthcare sector
- Innovation in biologics and high potency API Escalation in incidence and rate of growth of diabetes, cancer, cardiovascular diseases and psychological illnesses

Growth in Indian CRAMs Industry

The growth in the API market is driven by several factors such as: the increase in development of biological APIs increase in demand for API packaging, upsurge in demand for abbreviated new drug applications (ANDA) and rise in drug master files (DMF) from Indian companies. Also, API packaging is significantly revenue-generating sub-segment. An important observation here is that even though captive manufacturers are currently leading the API market, they are expected to eventually partner with contract manufacturers to overcome the challenges of complex and costly in-house API manufacturing and increasing competition.

India, along with Brazil & China, has earned a place for itself as a top generic pharma player in the export market to the developed western countries by producing and supplying superior quality pharmaceuticals that come with reasonable pricing. The Indian Pharma industry has shown tremendous progress on several indices such as infrastructure, technology, product range, GMP (Good Manufacturing Practices), regulation compliant manufacturing facilities. Also, the high-quality standards of purity; stability and international safety; health and environmental protection under which bulk active ingredients are manufactured and supplied by Indian Pharmaceutical companies ensure that they will pass through several rounds of stringent assessment by various regulatory authorities in the importing countries of buyer companies. Aggressively pursuing overseas market expansion, Indian Pharma companies are now seeking regulatory approvals in US in specialised segments such as anti-infectives, cardiovascular and CNS group.

Challenges to Indian CRAMS Industry

The global CRAMS industry faces multiple challenges. Regulation of drug manufacture and its processes and practices is carried out by the respective Food and Drug

WE OFFER A GLOBALLY COMPETITIVE AND COST-EFFECTIVE INTEGRATED PRODUCT MIX OF HIGH-TECHNOLOGY SERVICES, HIGH-END RESEARCH AND PRODUCTION FACILITIES AND INNOVATIVE BIOLOGICS.

Administration Departments at the state level. Due to lack of a unified single Central authority, the enforcement of laws tends to vary from state to state. Such a regulatory framework is inconsistent with the long-term goals of enforcing Good Manufacturing Practices (GMP). Moreover there is requirement of qualified medical professionals for research into diseases and sub-sectors such as biomedical. The 12th Five Year Plan has mentioned the need to have qualified medical professionals for research into new diseases, cheaper drugs and emerging sub-sectors such as bio-medicals. The Planning Commission's Working Group on Drugs and Pharmaceuticals has proposed setting up of six new National Institutes of Pharmaceutical Education and Research to meet the growing demand.

Indian Pharmaceutical Industry

The Indian Pharma industry poised to grow to US\$ 100 billion by 2025 has unfailingly been on a strong growth trajectory for many years now. The outlook for the next five-year period remains extremely positive especially in the bulk exports of generics or off-patent products. This is good news specifically for Indian Pharma CRAMS. The sub-sector has already earned a well-deserved position in the global Pharma manufacturing space by offering a globally competitive and cost-effective integrated product mix of high-technology services, high-end research and production facilities and innovative biologics, can maximise the opportunity. Indian Pharma companies must seize the opportunity in outpacing its cut-throat rivals and become the largest Pharma player in the world from its current share of roughly 2.5%. It is now time for the Indian model to become the global benchmark. This will not

only help realise the ambitious target of US\$ 100 billion worldwide by 2025, but also ensure a big piece of a pie for Indian pharma pie. The pharmaceutical business is driven by research and development; the financial viability and sustenance is driven by cost advantage; and the growth is driven by a good blend of systems, processes and procedures which are the result of continuous monitoring and human involvement.

Business Overview

About Dishman Carbogen Amcis Limited

The Dishman Group is a global and integrated CRAMS player with strong capabilities across the value chain – from process research and development to late-stage clinical and commercial manufacturing. Dishman Carbogen Amcis Limited, the flagship company, includes its Indian and foreign subsidiaries, joint ventures and associate companies across the globe. We are the preferred global outsourcing partner present across multiple continents and countries, including the United States, Switzerland, UK, France, Netherlands, China, Japan, Middle-East and India. We service customers from all the key advanced markets including US, Europe and Asia.

We are equipped with strong chemistry skills and large-scale multi-purpose manufacturing capacities. We have a wide range of research competencies and 9 manufacturing capacities and a global presence with manufacturing sites in Europe, India and China. Of these, 4 are in Switzerland; 2 in India; and one each in UK, France, Netherlands and China. Our HiPo facility at Bavla, India, is one of the largest facility in Asia, which enables us to gain from the high margin HiPo opportunity in the oncology space and other highly potent compounds.

We started out as a manufacturer of quaternary ammonium and phosphate compounds, and soon became one of the fastest-expanding companies in the CRAMS space in India. We ventured into the CRAMS business with a contract to develop and manufacture an Active Pharmaceutical Ingredient for the innovator. We

were one of the first companies in India to bring a new chemical entity into India for successful development and commercial manufacturing. Since then, we have entered into multiple contracts with innovator companies. Our growth by way of acquisitions over the last 13 years has yielded us rich dividends in terms of the exceptional talent pool and unparalleled operational excellence.

Our Key Segments

Our key segments include CRAMS (Contract Research and Manufacturing Services) and Marketable Molecules. The CRAMS segment is further broken down into Contract Research Services and Contract Manufacturing Services, which we offer to our customers.

Our Product Portfolio

ALL OUR FACILITIES OPERATE UNDER CURRENT GOOD MANUFACTURING PRACTICES (CGMP) AND CAN PRODUCE MATERIAL FOR PRECLINICAL TESTING, CLINICAL TRIALS AND COMMERCIAL USE.

Our Business Verticals

1. CONTRACT RESEARCH AND MANUFACTURING SERVICES (CRAMS)

Our principal line of business is Contract Research and Manufacturing Services (CRAMS). We are an integrated CRAMS player with strong capabilities across the value chain. Through our CRAMS business, we assist drug innovators in development and optimisation of processes for novel drug molecules in various stages of the development process. The CRAMS segment manufactures drug quantities required for conducting clinical trials.

Once the innovative molecules are approved, this segment explores the possibility of possible large-scale commercial supply tie-ups. We provide end-to-end high-value CRAMS offerings right from process research and development to late-stage clinical and commercial manufacturing. CRAMS segment contributes nearly 76% to our total revenues. With an expanded capacity in place, we are strongly placed to benefit from a strong growth in the global CRAMS industry.

a. Carbogen Amcis

Carbogen Amcis is a leading service provider, offering a portfolio of drug development and commercialisation services to the pharmaceutical and biopharmaceutical industries at all stages of drug development. Our integrated services for Drug Substances (DS) and Drug Products (DP) provide

innovative solutions to support timely and safe drug development. Custom synthesis operations within the Dishman Group include the two facilities in India and the Netherlands, as well as the seven facilities under the Carbogen Amcis brand: four in Switzerland, one in the UK, one in China, and one in France.

Carbogen Amcis provides services for the development and manufacturing of highly potent drug substances (APIs) and drug products applying state-of-the-art containment technologies. All facilities operate under current Good Manufacturing Practices (cGMP) and can produce material for preclinical testing, clinical trials and commercial use. Our manufacturing sites are regularly inspected by the US Food and Drug Administration (FDA) and local regulatory authorities. The large-scale production capacities (up to 8,000 L) allow the efficient production of non-GMP intermediates that can be further processed at the Carbogen Amcis Swiss facilities. Our site in Riom (France) offers aseptic cGMP manufacturing for liquid or freeze-dried products including for complex process or products such as drug delivery, highly potent and antibody drug conjugates (ADC). A wide range of filling volumes and packaging components (vials or syringes) could be applied to support pre-clinical and clinical studies all over the world. Formulation, process development and upscaling services for liquid and freeze-dried products are also part of our service offering.

We are fully committed to managing the risks associated with handling and producing highly potent and/or toxic materials. Safety and quality considerations encompass our personnel, our customers and patients using the materials we produce, as well as the environment. We are dedicated to maintaining and improving safety, environmental and health standards above and beyond the standard legal requirements. This remains the responsibility of both our

management and individual employees. All processes follow our “protection cascade” of four increasing levels of containment technology systems and procedures, ensuring that worker safety and product quality are never compromised.

We have successfully managed numerous drug-linker projects. Since the first ADC project in 2005, many customers, ranging from small biotech to large pharmaceutical companies, expressed a growing interest in our ADC and bio-conjugation abilities. We have handled projects from payload/warhead manufacture to drug-linker, then to conjugation and final drug product all in house. Our clean room suites are fully qualified for cGMP manufacturing dedicated to bioconjugation. This is in conjunction with our state-of-the-art purification technologies and exceptional analytical/fill-and-finish capabilities. We are currently working on about nine ADC projects across Phase II and Phase III development phases and this healthy pipeline of such niche products speaks volumes about our technical know-how and R&D expertise.

b. Dishman India

Dishman is a global outsourcing partner for the pharmaceutical industry offering a portfolio of development, scale-up and manufacturing services. Dishman improves its customers businesses by providing a range of development and manufacturing solutions at locations in Europe and India. Our commitment is to deliver high added value solutions with technical excellence and to be a reliable partner to our customers, protecting their interests as if they were our own.

Dishman offers Process R&D with a specialisation in developing processes that are truly scalable through to commercialisation, be this through process research, process development or optimisation. We have a scientist pool of 200 people operating in continuous three shifts on a daily basis in state-of-the-art dedicated R&D centres. Our promise is safe, efficient scale-up

and problem solving delivering robust, economic processes. Dishman enforces strict IP protection policies. We protect our customers’ interests as if they were our own.

2. MARKETABLE MOLECULES

a. Specialty Chemicals

Dishman Specialty Chemicals is the global leader in the specialty chemicals segment and the leading manufacturer of Phase Transfer Catalysts. It manufactures and supplies high-quality intermediates, fine chemicals, and various products for pharmaceutical, cosmetic and related industries. The Company had a long association with the manufacture and supply of Quaternary ammonium compounds (Quats) for use as phase transfer catalysts. We have world-class manufacturing expertise, logistics and competitive pricing. We possess domain expertise in solids handling technology, which has helped us expand our offerings to include ammonium and phosphonium high-purity solid Quats, Phosphoranes and

WE ARE THE MARKET LEADERS IN THE ADVANCED AND REGULATED VITAMIN D MARKET. OUR FOCUS HAS BEEN TO INCREASE OUR VITAMINS BUSINESS BY WAY OF FORWARD INTEGRATION.

Wittig reagents. We have also gained expertise in providing tailor-made solutions.

b. Vitamins and Chemicals

Dishman Vitamins & Chemicals manufactures and supplies a range of Vitamin D analogues. It also manufactures cholesterol and lanolin related products for pharmaceutical, cosmetic and related markets. After having acquired our Vitamin D3 business in Netherlands, we had to make significant changes to the business strategy over the last 5-6 years, due to which the profitability at this subsidiary has increased many-folds. We are the market leaders in the advanced regulated markets in the Vitamin D space. Our focus has been to increase our Vitamins business by way of forward integration at our Vitamin D facility in India. We are in the process of commencing operations in this segment in India, which will add value to our Vitamin D business.

c. Disinfectants

Dishman Care has a range of hand and body wash, sanitisers and antiseptics, apart from its active pharmaceutical ingredients and formulations businesses. We will offer a range of Antiseptics and Disinfectants for application in healthcare and related industries. Our range of products will include bulk drugs, phase transfer catalyst and fine chemicals. We shall have a deep portfolio of 'next generation' innovative antiseptic and disinfectant formulations. Our product pipeline specialises in

high quality, cost effective, proven anti-microbial products based on Chlorhexidine Gluconate (CHG) and Octenidine dihydrochloride (OCT). We shall provide specialist products for environmental decontamination based on hydrogen peroxide disinfectant.

Our Competitive Strengths

1. CAPABILITIES ACROSS THE CRAMS VALUE CHAIN

Today, the Dishman and Carbogen Amcis brands are perceived by global customers as a preferred global outsourcing partners with capabilities across the entire CRAMS value chain, with services ranging from process R&D and pilot supply, to full scale and commercial manufacturing from purpose built and dedicated facilities. The Group's India and Chinese facilities possess strong chemistry skill sets: a large dedicated multiple shift R&D operations; and multiple dedicated production facilities for APIs and intermediates.

Our Presence along the Value Chain:

2. HIGH POTENCY API CAPABILITY

The Dishman Group has invested in world class capabilities to address the Anti-Body Conjugates (ADC) market. Coupled with 14 years of HiPo API experience, the High Potency API business will represent a significant opportunity for step change in the Group's top and bottom line growth. Our containment facilities are designed based on a containment concept utilising barrier isolation technology and Rapid Transfer Ports (RTPs) as well as a strict zone concept with pressure

cascades, airlocks and access controls. This allows the safe handling of highly potent compounds including cytotoxics. We offer services starting from laboratory scale for process research and development purposes up to large scale manufacturing in 1'600 L vessels. To support the API development process through all stages, a variety of high containment analytical and purification capabilities complements the chemistry service portfolio.

The Group has a strongly differentiated set of capabilities in the HiPo API arena with pre-clinical API, phase 1/phase 2/phase 3 and commercial API and up to clinical Ph2 parenteral dosage form capabilities. All these capabilities remain in house and underwritten by a consolidated project management capability to take customers from pre-clinical stages through to commercial manufacturing of APIs.

3. SCIENTIFIC ADVANCEMENTS

Successful drug development is a balance between speed, quality and costs. We aim to offer our customers a choice of state-of-the-art tools combined with

qualified and experienced staff to best meet these often-changing priorities. Carbogen Amcis has built up a portfolio of specialist services to give customers the highest degree of flexibility possible.

Chromatography - Chromatography often forms part of a fast route to producing initial quantities of material. We offer customised chromatography solutions for the separation and purification of APIs and intermediates, including highly active APIs and impurity isolation. Our dedicated group of chemists have more than 50 years' experience in the group expertise in method development and scale-up in a variety of different chromatographic techniques, all in accordance with current Good Manufacturing Practice (cGMP) environment. Cost-effective large-scale chromatography is also possible given the correct infrastructure. Carbogen Amcis offers Flash Chromatography (Biotage), SMB and HPLC to effectively produce clinical trial quantities of APIs and commercial products.

Crystallisation Services - Defining the best crystalline form of an Active Pharmaceutical Ingredient (API) is crucial in drug development, since it has a significant impact on its bioavailability and formulation properties. Carbogen Amcis has established a service supporting our customers with crystallisation investigations including solubility tests, salt screening, and optimisation of the crystallisation process and the solid/liquid separation in the API isolation process. Polymorphism screening complements the service portfolio. We offer online monitoring of critical parameters such as particle size, turbidity, temperature, and pH value, as well as analytical services dedicated to solid phase characterisation including hot stage microscopy, differential scanning calorimetry, Dynamic Vapor Sorption (DVS) and x-ray powder diffraction.

4. LEADING MANUFACTURING FACILITIES

Our state-of-the-art infrastructure includes process research and development (PR&D) laboratories and, one laboratory dedicated to conjugation of small and large molecules and manufacturing capabilities.

WE ARE A ONE-STOP SHOP FOR THE DEVELOPMENT AND MANUFACTURING OF APIs FOR ALL TYPES OF MOLECULES. OUR HIPO CAPABILITIES DIFFERENTIATE US FROM OUR PEERS.

Carbogen Amcis delivers leading process research services that support the drug development process. Early Active Pharmaceutical Ingredient (API) manufacture centers on the rapid synthesis of supplies necessary to perform both toxicology and early phase clinical trials. Typical batch sizes here range from 1 gram to 50 kg scale and are prepared in the highest standard of current Good Manufacturing Practices (cGMP).

We internally optimise each site with all the equipment necessary to help your project to become a success. We provide unparalleled analytical support for research, development and commercial production of late stage intermediates and APIs, including pre-formulation studies to support drug product development. In addition to pre-formulation services, solid state and crystallisation services, and analytical support for physicochemical characterisation and method validation, Carbogen Amcis offers a complete range of drug product development and manufacturing services at our Riom site in France. Our specialty is the injectable space and the handling of complex compounds such as highly potent APIs, biological products and drug delivery. This site is exclusively dedicated to the development and the cGMP manufacturing to the fast supply of batches for clinical studies.

Carbogen Amcis utilises the Shanghai manufacturing facility for manufacturing the intermediates for the final API, which gets manufactured in the Swiss facility. This facility is also cGMP approved and the plan is to make

it equipped to manufacture the final API as well, which would act as a good alternate manufacturing site for the APIs manufacturing. Carbogen Amcis utilises its UK facility as the one for manufacturing non-GMP intermediates and starting material, which again feeds into the Swiss facility for manufacturing the final API or gets shipped to the customer.

Dishman Carbogen Amcis facilities in India provide the group the large-scale development and manufacturing capabilities, which ensures that the customer does not have to move outside of the Dishman group to get the large volume products developed and manufactured. Thus, the group acts like a one-stop shop for the development and manufacturing of APIs for all types of molecules. Moreover, the HiPo capabilities are unique to the group and differentiates it from its peers.

Key Operational Highlights of FY2018:

- Improved capacity utilisation at manufacturing facilities by focussing more on small and mid-sized global biotech companies.
- Efficient utilisation of the installed capacity in the HiPo facility, besides other facilities in India and China. Diversified across new geographies, besides increasing penetration in the US market and leveraging cross-selling opportunities.
- Churned existing capacities better by focussing more on low-volume, high-value orders.
- Earned incremental revenues from HiPo business with significantly higher gross contribution.
- Improved margins with value-added order execution from Vitamin D analogues facility at Netherlands.

Management Outlook

Having commenced operations as a quats manufacturer, we later transformed ourselves into an integrated CRAMS player. We are present across the value chain from building blocks to commercialisation and launch stage. We also have an established global presence with manufacturing

sites in Europe, India, China and Saudi Arabia. Our HPAPI facility at Bavla, Ahmedabad is one of the largest in the world and has placed us at the forefront to gain from the high-margin oncology opportunity. Today, we have a robust pipeline of early and late phase 3 molecules across Carbogen Amcis and the Indian facilities.

There is no major capex planned for the next few years, with ~76% of the portfolio geared towards higher-end API supplies. With this, we foresee an improvement in our profitability and higher free cash flows which will improve the return ratios. Vitamin D3, bulk drugs, generic APIs and disinfectants account for the balance ~34%. Our key focus in Vitamin D3 is more on quality. Operational cost and interest cost savings are expected to drive earnings CAGR over the next few years. Scalability of HiPo facility and approvals from regulatory authorities is expected to result in better profitability.

Key Strategies for Future Sustainable Growth

- To improve margins with effective capacity utilisation and high-margin revenues from oncology, CVS, CNS, ophthalmic and orphan drugs segment.
- To improve asset turnover, reduce net leverage and improve return ratios.

Research & Development

Globally, Dishman has a strong R&D team and has over 450 projects across various stages of developments, with more than 550 scientists ranging from 50 Doctorates as Senior Scientists and 200 Scientists. The team is working across development project for NCEs as well as generic APIs (new niche therapeutic areas like MRI contrast reagent APIs, Vitamin analogues (3 under development and 3 under future planning), steroids, anticancer, antineoplastic drugs, anti-diabetic, anti-tuberculosis, antihypertensive, antiviral, antiseptic and ophthalmic drugs), including HiPo API & NCEs and HiPo generic. During the years, Dishman Group has acquired newer and sophisticated analytical instruments instrumental for doing complex and high-cost research projects in steroids and oncology drugs.

Financial Overview

Business Highlights (Consolidated)

(₹ in Crore)			
Particulars	FY2018	FY2017	Growth (%)
Net Sales & Operating Income	1,694.79	1,713.69	-1.10%
Other Income	45.69	26.13	74.86%
Total Income	1,740.48	1,739.82	0.04%
EBITDA (without Other Income)	445.35	453.35	-1.76%
Depreciation	211.42	213.51	-0.98%
PBIT	279.62	265.1	5.48%
Interest & other Finance charges	48.83	49.01	-0.37%
Profit Before Tax	230.79	216.09	6.80%
Tax Expense	76.22	70.66	7.87%
Profit after Tax	154.57	145.43	6.28%
Cash Profit	389.60	299.40	30%

During the year the operating income was ₹ 1,694.79 crore compared to ₹ 1,713.69 crore in the previous year. CRAMS segment registered a turnover of ₹ 1,293.69 crore compared to ₹ 1,259.60 crore during the previous year. Others segment which includes bulk drugs, intermediates, Vitamin D, Quats and speciality chemicals and outsourced/traded goods registered a revenue of ₹ 401.10 crore.

CRAMS is our largest business segment which caters to the requirements of multi-national pharmaceutical companies internationally. We develop intermediates/APIs based on our customer's request. This business involves significant R&D efforts to develop the niche molecules. Our wholly owned subsidiary Carbogen Amcis located in Switzerland is spearheading our R&D efforts. Around 1,295.39 crore of our consolidated turnover is generated from CRAMS segment.

Other segment (which includes bulk drugs, intermediates, Vitamin D, speciality chemicals and outsourced/trade goods) contributed around ₹ 401.10 crore of consolidated turnover in 2017-2018. Out of ₹ 1,694.79 crore (previous year ₹ 1,713.69 crore) sales, Carbogen Amcis has accounted for sales of ₹ 973.33 crore (previous year

₹ 912.05 crore), Vitamin D and speciality chemicals business has accounted for sales of ₹ 196.26 crore (previous year ₹ 241.43 crore) and Carbogen UK Ltd. accounted for sales of ₹ 49.55 crore (previous year ₹ 48.92 crore). Remaining sales of ₹ 433.57 crore (previous year ₹ 423.75 crore) was accounted by DPCL and its trading subsidiaries.

Material Costs

- Raw material consumption for the year was ₹ 336.93 crore, as against ₹ 329.30 crore in the previous year.
- Inventory of raw materials decreased by ₹ 7.27 crore during the year.
- Work in process increased by ₹ 78.41 crore and finished goods decreased by ₹ 13.15 crore, respectively.

Manufacturing Expenses

- Manufacturing expenses mainly comprise Power & Fuel ₹ 48.67 crore and Repairs & Maintenance ₹. 62.98 crore. This was against ₹ 49.47 crore and ₹ 70.44 crore, respectively, in the previous year.
- Our Manufacturing Expenses accounted for 7.64% of sales during the year, as against 8.26% during the previous year.

Administrative, Selling and Other Expenses

- Our major components of administrative, selling and other expenses include rent, rates & taxes, legal & professional charges, clearing & forwarding, travelling & conveyance, and insurance premium, among others.
- Administrative, selling and other expenses for the year amounted to ₹ 155.09 crore as against ₹ 193.48 crore during the previous year. These expenses accounted for 8.03% sales during the year, as against 11.29% during the previous year.

Employee Emoluments

- Employee emoluments (other than managerial remuneration) increased to ₹ 625.40 crore during the year, as against ₹ 596.02 crore during the previous year.

Interest and Finance Charges

- Interest and Finance charges during the year decreased to ₹ 48.83 crore, as against ₹ 49.01 crore during the previous year.

Depreciation

- Depreciation charges for the current year amounted to ₹ 122.96 crore, as against ₹ 120.95 crore during the previous year.
- Total Amortisation charges for the current year stood at ₹ 92.88 crore, similar to ₹ 92.39 crore in the previous year.
- Addition to fixed assets during the year was ₹ 239.57 crore, as against ₹ 155.08 crore during the previous year.

Provision for Tax

- ₹ 76.21 crore (net of MAT entitlement) was provided during the year towards current tax, as against ₹ 70.65 crore during the previous year. The Company has provided provision for deferred tax of ₹ 27.50 crore during the year, as against deferred tax expense of ₹ 15.25 crore during the previous year.

Profit After Tax

- Net Profit after Tax for the current year was ₹ 154.56 crore, as against ₹ 145.43 crore during the previous year.
- Cash Profit After Tax for the current year was ₹ 389.60 crore, as against ₹ 299.40 crore in the previous year.

Earnings Per Share

- Basic Earnings Per Share for the current year works out to ₹ 9.58, as against ₹ 9.01 during the previous year.
- Cash Earnings Per Share for the current year works out to ₹ 24.0, as against ₹ 18.5 in the previous year.

Financial Condition

(i) Secured Loans:

Secured loans stood at ₹ 939.95 crore as at March 31, 2018, as against ₹ 812.36 crore as at March 31, 2017

(ii) Unsecured Loans:

Unsecured loans as on March 31, 2018 were at ₹ 154.87 crore, as against ₹ 137.35 crore as on March 31, 2017.

Composition of Expenses & Profit (% to Consolidated Revenue)

OUR CRAMS BUSINESS INVOLVES SIGNIFICANT R&D EFFORTS TO DEVELOP NICHE MOLECULES. CARBOGEN AMCIS IN SWITZERLAND IS SPEARHEADING OUR R&D EFFORTS.

(iii) Liquid Investments as of March 31, 2018 are as under.

(₹ in Crore)

Particulars	March 31 st , 2018	March 31 st , 2017
Non-Current	55.99	-
Current	94.35	-
Total	150.34	-

(iv) Inventories:

Major items of inventories as of March 31, 2018 are as under:

(₹ in Crore)

Particulars	2017-18	2016-17
Raw materials	89.08	96.35
Work in process	272.05	193.64
Finished Goods	123.43	136.58

(v) Debtors:

Debtors as of March 31, 2018 amounted to ₹ 444.40 crore, as against ₹ 285.55 crore during the previous year

(vi) Cash & Bank Balance:

Cash and Bank Balance as on March 31, 2018 is ₹ 69.06 crore, as against ₹ 87.39 crore as on March 31, 2017.

(vii) Creditors:

Creditors as of March 31, 2018 is ₹ 185.92 crore as compared to ₹ 85.64 crore as at March 31, 2017.

Segment-Wise Or Product-Wise Performance:

The business segments of the Company comprise the following :

Segment	Description of the Activity
CRAMS	Contract Research and Manufacturing Segment under long term supply agreements
Others	Bulk Drugs, Intermediates, Vitamin D, Quats and Specialty Chemicals and Outsourced/Traded Goods

The break-up of Company's total income from the product segments viz. "CRAMS Segment" and "Other Segments" for the last three years is as under:

(₹ in Crore)

Product Segment	March 31 st , 2016	March 31 st , 2017	March 31 st , 2018
CRAMS	1,142.49	1,259.60	1,293.69
Others	459.20	454.08	401.10
Total	1,601.69	1,713.68	1,694.79

Internal Control Systems

Your Company has a well-established system of internal control and internal audit, commensurate with its size and complexity of the business and considering the essential components of internal control stated in the Guidance Note on Audit of Internal Financial Controls Over Financial Reporting ("the Guidance Note") issued by the Institute of Chartered Accountants of India ("the ICAI"). Your Company has appropriate internal control systems for business processes with regards to efficiency of operations, financial reporting, compliance with applicable laws and regulations, among others and with the objective of safeguarding the Company's assets, ensuring that

transactions are properly recorded and authorised and providing significant assurance at reasonable cost, of the integrity, objectivity and reliability of financial information. The Company continually upgrades internal control system by adding better process control, various audit trails and use of external management assurance services, whenever required. The internal control system is supplemented by extensive internal audits, conducted by independent firms of chartered accountants in close coordination with finance and account department. The findings of Audit Team are discussed internally as well as in audit committee meetings. The Audit Committee of the Board of Directors reviews the adequacy and effectiveness of internal control systems and suggests improvement for strengthening them.

Risk Management

Global operations and product development for regulated markets pose significant challenges and risks for the organisation. Such risks, if not identified and addressed properly in a timely manner could adversely impact accomplishment of the overall objectives of the organisation and its sustainability. An effective risk management framework enhances the organisation's ability to proactively address its risks and opportunities by determining a risk mitigation strategy and monitoring its progress on continuous basis. Our Enterprise Risk Management (ERM) framework encompasses practices relating to identification, assessment, monitoring and mitigating of various risks to key business objectives. ERM at Dishman seeks to minimise adverse impact of risks on our key business objectives and enable the Company to leverage the market opportunity effectively.

Our risk management framework is intended to ensure that risks are identified in a timely manner. We have implemented an integrated risk management framework to identify, assess, prioritise, manage/mitigate, monitor and communicate the risk across the Company. Senior management personnel are part of our risk management structure. Plant level committees headed by senior management personnel meet at regular intervals to identify various risks, assess, prioritise the risks. After

due deliberations, appropriate strategies are made for managing/mitigating the risks. The Company takes the help of independent professional firms to review the risk management structure and implementation of risk management policies. Audit Committee, on a quarterly basis, reviews the adequacy and effectiveness of the risk management strategies, implementation of risk management/mitigation policies. Audit Committee advises the Board on matters of significant concerns for redressal.

Opportunities & Threats

Most of the innovator companies are facing challenge of depleting research pipeline and losing patent protection for their blockbuster drugs in the next few years. The new drug discovery process is also becoming more difficult with reducing success probabilities and increasing research and development costs. This has opened up opportunities to CRAMS players from low cost destinations like India. Dishman has identified this opportunity very early and started working with innovators with customs synthesis projects and contract manufacturing of APIs,

MOST OF THE RECENT INNOVATION IN NMEs IS FROM “SMALL TO MID-SIZED” BIO-PHARMACEUTICAL ORGANISATIONS. THIS HAS CHANGED THE DYNAMICS OF THE BUSINESS, AS LARGE PHARMACEUTICAL PLAYERS ARE INCREASINGLY BECOMING MAINLY MARKETING AND “FINISHED DOSE FORM” ORGANISATIONS.

which result into overall growth in turnover. In view of the huge potential the CRAMS segment offers to Indian companies, many of the big pharmaceutical companies in India started exploring opportunities for a share in CRAMS segment with big investments. This may result in increased competition in the long run. However, with the research and innovation capabilities that Dishman has developed over the years across the globe, the technical know-how is unparalleled. In addition to the above, another major development has been on the New Molecule Entities (NMEs) front. Most of the recent innovation in this segment is from “small to mid-sized” bio-pharmaceutical organisations. This has changed the dynamics of this business, as large pharmaceutical players are increasingly becoming mainly marketing and “finished dose form” organisations. The Company believes that it can manufacture various APIs/intermediates and speciality chemicals of best quality at a low cost. Many of innovator companies are outsourcing their products to our Company. Recognising this opportunity, the Company continued to take initiatives in reducing its costs by employing lean manufacturing techniques & resource management initiatives and broadening the product base.

Information Technology

Dishman is making significant investments on the digital reinvention platform in partnership with IBM in India and across all subsidiaries. The goal is to make all business processes as much automated as possible thus increasing the efficiency and accuracy of all processes. Dishman has developed a framework to harness the opportunities presented by prevalence of new-age digital technologies, and transform to become a digitally savvy pharmaceutical company. Various technologies as well as platforms have been piloted to deploy the agenda so that a better and integrated experience can be delivered to our partners and clients. We focus on Data Analytics to drive agile business decisions, automation for business processes, innovation through digital business models, and Consumer Engagement to listen, reach out and engage with our customers. In analytics and automation, the Company's strategy has been to capitalise on the latest advancements in technology for improving the business performance. We are targeting at deepening the initiatives along the

digital consumer engagement to enhance the Company's automation in its manufacturing plants and scaling it up year after year.

Industrial Relations and Human Resource Management

The Company has continued with its drive to institutionalise and upgrade its HR processes. The diversified skill sets of our employees add significant worth to the Company. Every organisation which values and appreciates its Human Resource succeeds in its goals and receives positive results. At Dishman, we always believe in the concept of human empowerment. We firmly believe that human resource is the most important assets of the organisation, as it influences growth, progress, profits and shareholders' values. During the year, we continued our efforts aimed at improving the HR policies and processes to enhance our performance. Our mission is to create a value system and behavioral skills to ensure achievement of our short and long-term objectives. The Company, as on March 31, 2018, had 989 employees on its rolls, compared to 845 employees in the previous year. We continue to

attract excellent talent both from within and outside India to further our business interests. Industrial Relations continue to be cordial.

Cautionary Statement

This document contains statements about expected future events, financial and operating results of Dishman Carbogen Amcis Limited, which are forward-looking. By their nature, forward-looking statements require the Company to make assumptions and are subject to inherent risks and uncertainties. There is significant risk that the assumptions, predictions and other forward-looking statements will not prove to be accurate. Readers are cautioned not to place undue reliance on forward-looking statements as a number of factors could cause assumptions, actual future results and events to differ materially from those expressed in the forward-looking statements. Accordingly, this document is subject to the disclaimer and qualified in its entirety by the assumptions, qualifications and risk factors referred to in the management's discussion and analysis of Dishman Carbogen Amcis Limited's Annual Report, FY2018.
